

Soda Ash

Specialty Chemical

Description Soda Ash is a white, granular powder primarily used to condition and soften make-up water and raise pH

Applications/Functions

- Treat out hardness due to calcium in make-up water
- Raise pH

Advantages

- Can eliminate calcium ions by removing them as insoluble calcium carbonate
- Can maximize the performance of bentonite and polymer product

Typical Properties

• Appearance	Variable-colored powder (gray to tan)
• pH of 5% solution	11.5
• Bulk density, lb/ft ³	57-65

Recommended Treatment

- Hardness and pH levels of make-up water should be checked prior to addition of Soda Ash.
- Addition of Soda Ash should always be done prior to addition of bentonite or polymer to the fluid system.
- Soda Ash should not be added at the same time as other drilling fluid components.
- When treating make-up water pH ranges should be maintained between 8.5 – 9.5

General Treatment:

- 1-2 pounds per 100 gallons of make-up water or 1.2-2.4 kilograms per cubic meter of make-up water.
 - Use as required to remove calcium ions but do not add in excess as overtreatment can lead to detrimental effects and reduced performance of the drilling fluid components and/or system.
 - Mix slowly through a jet mixer or sift slowly into the vortex of a high-speed stirrer.
-

Packaging Soda Ash is packaged in 50-lb (22.7 kg) or 100-lb (45.4 kg) multiwall paper bags.

Availability Soda Ash can be purchased through any Baroid Industrial Drilling Products Retailer. To locate the Baroid IDP retailer nearest you contact the Customer Service Department in Houston or your area IDP Sales Representative.
